

# THE MATERIAL HANDLER SYSTEM

Exceeded the Status Quo – Utilize the proven technology behind the Cranesmart Load Pin System to improve job-site efficiency, increase your bottom line and promote a safer workplace culture.

**EFFICIENT MATERIAL HANDLER LIFTING.  
MADE SIMPLE.**

## *Load your transports correctly*

No more under/overloading in advance of the scale; avoid fines, and maximize the efficiency of your entire operation.

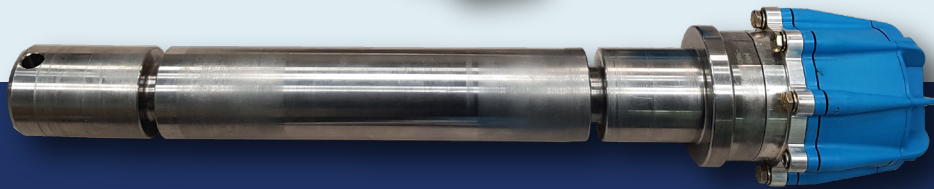

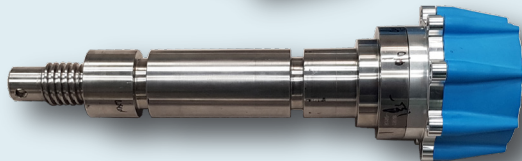

## *Eliminate the guessing game*

Operators can work off of the knowledge incurred with having a real-time load indication of their active pick; allowing them to make sure they have enough material within the attachment before transporting it to a bailer or a transport.

## *Engineered accurate and simple*

Wireless load pins ship pre-calibrated, making installation and operation simple, without the requirement of a technician.

### *Wireless*

Load Pin system engineered for all Material Handlers and Knuckleboom Cranes.

- ▶ Load Pin reads accurately in all boom angle or attachment positions
- ▶ System can be integrated to work within existing joysticks or controls in machine
- ▶ Individual loads can be captured with a simple button press by the operator to achieve a cumulative load total of an unlimited number of picks loaded within a transport
- ▶ The Cranesmart load pin can replace any sheave pin or load-bearing pin in any lifting application
- ▶ Rated for use in any job-site environment from marine to oilfield.
- ▶ Installation in under one hour
- ▶ Free battery replacements for life of system; supported by the best after-the-sale service in the industry.
